**Gastrointestinal Motility Disorders: Digestive and Non**

09/08/2021 · Gastric motility (or gastrointestinal motility) is the process by which food travels through the digestive tract via a series of muscular contractions called peristalsis. When someone has a gastric motility disorder, these contractions do not occur normally, and food is not able to pass through the intestines properly. "Gastric motility disorders" is an umbrella term for a ...

**Intestinal pseudo-obstruction - Wikipedia**

Intestinal pseudo-obstruction (IPO) is a clinical syndrome caused by severe impairment in the ability of the intestines to push food through. It is characterized by the signs and symptoms of intestinal obstruction without any lesion in the intestinal lumen. Clinical features mimic those seen with mechanical intestinal obstructions and can include abdominal pain, nausea, abdominal ...
